<article>

As a lifelong learner, I am constantly seeking new opportunities to improve and expand my knowledge and skills. Each project I undertake presents its own set of unique challenges, which I approach by conducting thorough research and implementing effective solutions.

For instance, I have found that while prototyping with Adobe XD is enjoyable, it is not always the most efficient method. Instead, I utilise flutter for app development, allowing me to easily collaborate with our backend developers who handle server-side API and logic.

Similarly, for website development, I create templates using HTML and bootstrap, rather than designing them in Photoshop. I then convert them to PHP for menu includes and form validations.
